Ramkumar Ramachandra

LLVM compiler engineer with over a decade of experience, and a track record in open source work, specializing in the middle-end. Hobby research includes constructing mathematical objects using a proof assistant.

Work

Jan '26 – Present
Sr. Staff Compiler Engineer — Tenstorrent, United States
Upstream-first LLVM optimization for RISC-V. Improved the vectorizer, optimizing pointer-offset computations in VPlan.

Jun '24 – Jan '26
Compiler Tech Lead — Codasip, Bristol, England
Upstream-first LLVM optimization for RISC-V: landed 400 patches spanning most of the middle-end. Authored a new analysis, HashRecognize, and enabled optimization of cyclic-redundancy-check loops using a table-lookup, with impact on several real-world programs including Linux. Introduced a carry-less multiply intrinsic with generic lowering. Significantly improved vectorization, notably authoring the CSE and constant-folder in VPlan. Drove the *icmp samesign* optimization effort.

Mar '23 – Feb '24
Senior Compiler Engineer — Imagination Technologies, Kings Langley, England
LLVM optimization for a RISC-V VPU. Made small improvements to several middle-end optimizations, with impact on embedded benchmarks. Introduced vector variants of a rounding intrinsic with custom lowering for RISC-V. Downstream work included improving the benchmarking infrastructure, and scheduling support for the chip.

Aug '19 – Jan '23
Career break — Inria, IRIF, and Université Paris Cité
Career break to pursue interest in formalized mathematics. Audited courses in algebraic topology, and worked as an apprentice learning Rocq and type theory. Found a long-term collaborator, and began a line of research.

Feb '15 – Aug '17
Compiler Engineer — MathWorks, Natick, Massachusetts
Fixed the longest-standing bugs in the organization by carefully combing through x86 assembly. Worked with a pre-SSA IR to author and ship a LICM, and incremental-update algorithms for the program structure tree and dominator. Contributed to the in-house alias analysis. Implemented polyhedral loop optimizations using the *Integer Set Library*.

Talks and Publications

Feb '26
The very dependent recursive structure of iterated parametricity in indexed form
with Hugo Herbelin
A paper on our refined construction, with a highly recursive structure.
Pre-print: arXiv:2602.12689.

Jun '25
A parametricity-based formalization of semi-simplicial and semi-cubical sets
with Hugo Herbelin
Mathematical Structures in Computer Science
A paper on our construction of semi-simplicial and semi-cubical sets.
Published: 10.1017/S096012952500009X. Pre-print: arXiv:2401.00512.

Apr '25
Making LoopAccessAnalysis more precise
EuroLLVM, Berlin
A talk on the limitations and the recent improvements to the analysis behind the vectorizer.
Program: LLVM Developers' Meeting. Recorded video: YouTube.

Education and Open Source

2014 **Masters in Computer Engineering** Columbia University, New York

2012 **Bachelors and Masters in Physics** Indian Institute of Technology, Kharagpur

2013 – 2014 **Linux**
Landed 60 patches focused on improving perf tools.

2010 – 2014 **Git**
Landed 200 patches. Participated in Summer of Code 2010 and 2011, authoring the sequencer, enabling `git cherry-pick` and `git revert` to resume after conflicts. Authored `git rebase --autostash` and `remote.pushdefault`.

2010 **Subversion**
Authored svnrdump, a tool to import and export history from a remote svn server.

Keywords: C++, Python, LLVM, Compiler Optimization, RISC-V, Assembly, Rocq, Formalized Mathematics
